DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 5, 11 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Hashimoto (6,486,544 B1).

As to claims 1, 5, 11 and 12, Hashimoto teaches a circuit element in a first active region of a substrate and a circuit region in a second active region of a substrate, producing at least one conductive trace to connect the first and second circuit elements, thinning a portion of the substrate between the first and second regions and folding the substrate at the reduced-thickness region. See figures 8 and 10.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/829,664

Art Unit: 2812

Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hashimoto (6,486,544 B1) as applied to claim 1 above, and further in view of official notice.

As to claims 3 and 4, Hashimoto teaches circuit elements 320 and 330, as seen in figure 10. Hashimoto does not teach the circuit elements being specifically transistors or resistors. Hashimoto does teach the circuit elements to be semiconductor chips, and is notoriously well known in the art of semiconductor manufacturing that semiconductor chips have resistors and transistors, as well as other circuitry elements, and it would have been obvious to a person of ordinary skill in the art to modify the method of Hashimoto by adding transistors and resistors for functioning of the semiconductor chips.

Allowable Subject Matter

Claims 2, 6, 13 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 7-10 are dependent upon claim 6.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Scott Geyer whose telephone number is (571) 272-1958. The examiner can normally be reached on weekdays, between 10:00am - 6:30pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Lebentritt can be reached on (571) 272-1873. The fax
